Table 1: Wilcoxon rank-sum test results. The first three parts of the table are tests between different subsets of the Total, Spiritual, and Economic Impact variables and the fourth part is 'Other' variables. Column 1 has Impact type (for the first three groups). Column 2 has the name of the subsets tested against one another. Columns 3 and 4 have the respective medians of the variables. Column 5 has the test statistic for the Wilcoxon rank-sum test, and Column 6 has the p-value.

Table 2: Wilcoxon rank-sum test results by Impact type with a subdivision in Individual Impact according to how the two variables were separated. Column 1 has Impact type. Column 2 has the name of the subsets tested against one another. Columns 3 and 4 have the respective medians of the variables. Column 5 has the test statistic for the Wilcoxon rank-sum test, and Column 6 has the p-value.
